PARTNERS IN ALLIUM

For years “Bejo/De Groot en Slot” is the leading breeder of varieties for the cultivation of onion sets. Our newest varieties are launched on the market as onion sets under the brand name “Quality inside”.

Overwintering

Radar
overwintering

- The very earliest for planting in Fall
- Very high bolting tolerance
- Good winter hardiness
- Excellent skin and yield
- Suitable for direct sale
- Also available as organic

Troy 
overwintering

- Very high level of bolting tolerance
- Vigorous and high yield of round shaped bulbs
- Nice, deep yellow colour
- Suitable for direct sale
- Also available as organic

Electric
overwintering

- Semi-short day onion set
- Excellent for overwintering
- Shiny, dark red round onions of excellent quality
- Suitable for direct sale

Onion sets yellow

Forum 

- The very earliest for planting in Spring
- Ideal for early harvesting
- Attractive round onion of excellent quality with high bolting tolerance
- Thin necks allows a shorter drying process, so the crop is ready to market sooner

Troy 
early spring planting

- Very high level of bolting tolerance
- Vigorous and high yield of round shaped bulbs
- Nice, deep yellow colour
- Suitable for direct sale
- Also available as organic

Jagro 

- Very early and productive onion set
- Grows easily coarse
- Beautiful bronze yellow colour
- Suitable for direct sale

Jetset 

- Early, productive and nice globe bulbs
- Good combination of earliness and skin quality
- For early export destinations and local market
- Suitable for short storage
- Also available as organic

Stanfield

- Early, flat onion with nice yellow colour
- High dry matter content
- High bolting tolerance
- Suitable for long storage

Carballo

heat treated

- A round hybrid with a very high yield.
- Very suitable for dryer conditions due to its impressive root system.
- Produces a high yield with good quality onions
- Suitable for long term storage

Corona

heat treated

- Mid-early American type.
- Solid, globe shape with a brown skin
- Produces high percentage of jumbos
- Suitable for short storage

Boga

heat treated

- Mid-early, highly productive onion set
- Mildew resistant with good skin quality
- Nice round onion of excellent quality
- Very suitable for long storage
- Also available in organic

Hercules

- Mid-early, highly productive and very uniform
- Very suitable for long storage
- Round bulb
- Good bolting tolerance
- Excellent for the processing industry

Hysky

heat treated

- Mid-early and high productive
- Strong against fusarium and strong root system
- Suitable for long storage
- Also available in organic

Centurion

- Mid-early, highly productive and very uniform
- Good combination of earliness and yield
- Excellent skin quality and good bolting tolerance
- Suitable for medium-long storage
- Also available as organic

Onion sets red

Red Light
heat treated

- Earliest red hybrid onion set in the assortment
- Good combination of earliness, yield and colour
- Uniform in maturity
- Also available in organic

Red Ray
heat treated

- Uniform quality onion with excellent skin
- Beautiful deep red colour
- Productive because of strong root system
- Suitable for long storage

Redlander
heat treated

- The first red onion hybrid which is resistant against mildew (HR)
- Nice round onions of excellent quality
- Suitable for long term storage
- Only available in organic

Red Baron
heat treated

- Mid-early and very productive
- Beautiful dark red colouring
- Suitable for medium-long storage
- Also available in organic

Onion sets white

Icebear
heat treated

- A nice round shaped white onion
- Very suitable for dryer conditions
- It produces nice white onions with a high dry-matter content
- Suitable for short storage

Every year the breeding department of Bejo and De Groot en Slot is testing her varieties in their own trial fields in Europe. All information is based on a four year average, from these trials.

Earliness: one point higher indicates one week earlier harvestable. Yield: index number for comparison within the variety group. Skin quality: rating 1-10. A higher number indicates that the variety has a better storability. Storability: rating 1-10. A higher number indicates that the variety is slower to sprout. Firmness: rating 1-10. A higher number indicates a firmer onion. Bolting tolerance: - = low tolerance, +/- = average tolerance, + = high tolerance, ++ = very high tolerance and HT = heat treated. Dry matter: in percentage.

Quality inside

Unique genetics brought together in the newest varieties.

Bejo/De Groot en Slot: advice from the specialists.

Precise grading of the onion sets for an even development, an optimum timing of field treatments, and uniform ripening which gives the highest production of uniform onions.

A strictly controlled, healthy product. Cultivation and control following Naktuinbouw standards and procedures, complemented by the Bejo Quality Management system:

- Cultivated and delivered according to a closed tracking and tracing system. Consignments have full traceability due to the fact that the complete production process is managed; from seed cultivation to the harvest of onion sets throughout storage to point of delivery.
- Health: selection of clean production fields, field control during the growth and post harvest check in the laboratory of each lot.
- Consignment control on size and abnormalities before delivery.
- Information about the set count per kg.
- Representative samples tested on our own trial field on regrowth, trueness to type and health.
- Delivered with a quality certificate.
