Every year the breeding department of Bejo Zaden and De Groot en Slot is testing her varieties in their own trial fields in Europe. All information is based on a three year average, from these trials.

www.qualityinside.nl

Quality inside

- Unique genetics brought together in the newest varieties.
- Bejo Zaden/De Groot en Slot: advice from the specialists.
- Precise grading of the onion sets for an even development, an optimum timing of field treatments, and uniform ripening which gives the highest production of uniform onions.
- A strictly controlled, healthy product. Cultivation and control following Naktuinbouw standards and procedures, complemented by the Bejo Quality Management system:
- Cultivated and delivered according to a closed tracking and tracing system. Consignments have full traceability due to the fact that the complete production process is managed; from seed cultivation to the harvest of onion sets throughout storage to point of delivery.
- Health: selection of clean production fields, field control during the growth and post harvest check in the laboratory of each lot.
- Consignment control on size and abnormalities before delivery.
- Information about the set count per kg.
- Representative samples tested on our own trial field on regrowth, trueness to type and health.
- Delivered with a quality certificate.
